

---

**myJacoti®** is the web service that allows you to store your audio profiles in the cloud, share them across your devices, and connect to the Hearing Expert of your choice for remote fitting of Jacoti ListenApp.

Fitting is the process by which a hearing expert adapts the parameters related to your hearing loss, so that it “fits” you better than with the default settings.

Default settings have been chosen so they work for most people, but they don't take into account each individual's specificity, so you can consider that fitting is the personalisation of Jacoti ListenApp to your own specific hearing loss.

Remote fitting is the process of performing fitting without the physical presence of the hearing expert. In this case, it takes place over the Internet.

## Benefits

- + As a user: Remote fitting makes it easier to quickly communicate problems to the hearing expert of your choice. If he is immediately available online, this can lead to near instantaneous feedback and better parameter adjustment.
- + As a Hearing Expert: myJacoti platform may help you expand your client-base and be more efficient by using the remote fitting. It also enables you to set the parameters for your patients directly from our web interface. There is no longer a need to install specialised and costly software and hardware.

## Features

### Global Hearing Identifier

One login for personalizing the user's audio experience across devices.

### Easy linking with hearing expert

Link with the hearing expert of the user's choice both from the web and from Jacoti ListenApp

### Clinical History

Online instantaneous personalization of Jacoti ListenApp by a Hearing Expert.

### Secure web service API

All from a secured web service. Please see also our [privacy policy](#).

### Installation requirements

myJacoti is accessible from a web browser at [my.jacoti.com](http://my.jacoti.com) . It supports Internet Explorer 9 and above, recent Chrome and Mozilla Firefox versions among others.

## About Jacoti

We make state-of-the-art hearing solutions accessible and affordable for hearing-impaired individuals all over the world. As a company we realize this mission by focusing on the development and commercialization of hearing aid software and hearing support systems. We achieve this by integrating our proprietary technology with internet-ready consumer hardware such as smartphones.
